<u>Title:</u>	Website Development; ' Explore Pakistan '
<u>Description and Working:</u>	We will make a website naming ' Explore Pakistan '. It will be a tourism website having a main page as well as separate landing pages for each province of Pakistan. Main page will include top destinations, discounts, block diagrams, pictures and client reviews. Initially we will be adding major tourist attractions and historic places. Eating places, nearby hotels and maps will also be provided with each landmark mentioned per province. We will be using HTML, CSS and java script to develop our website.
<u>Motivation:</u>	Stepping in the 21st century, where everything is a touch away, our group decided to take it as an opportunity and create something different which will ease the tourists with finding a perfect destination for their holidays just by opening our website and entering the province they want to explore! This will appeal our modern-day costumers as they do not want to hassle when searching for a perfect destination in the outskirts, another city or province. Such initiatives will promote the tourism industry of Pakistan. In future, we can also convert our website into an application.
